

ARPIT KUMAR YADAV

FLUTTER DEVELOPER • CROSS-PLATFORM SPECIALIST

arpityadav783791@gmail.com +91 7652086399 Jaipur, Rajasthan, India Portfolio GitHub LinkedIn

PROFESSIONAL SUMMARY

Results-driven Flutter Developer with commercial production application experience developing cross-platform software using Dart, Flutter, and GetX/BLoC. Proven track record building responsive UIs, architecting decoupled modules using Clean Architecture and MVVM, integrating complex RESTful APIs, and implementing local persistence (Drift/SQLite). Strong problem solver dedicated to zero-jank 60fps performance and disciplined Git collaboration.

WORK EXPERIENCE

Flutter Developer Intern → Flutter Team Lead

April 2026 – Present

Xavirgin Technologies · Jaipur, India

- Joined Xavirgin Technologies as a Flutter Developer Intern in April 2026 and contributed to production Flutter application development, UI implementation, API integration, debugging, and feature delivery.
- Worked on FixMyMeeting, contributing to responsive UI development, REST API integration, location-based services, performance improvements, and production bug resolution.
- Promoted to Flutter Team Lead for a 3-month period, taking additional responsibility for coordinating Flutter development tasks, supporting team members, reviewing implementation approaches, and maintaining development quality.
- Contributed to improving codebase quality, application reliability, and smooth user experience while working with Flutter, Dart, GetX/BLoC, REST APIs, and production development workflows.

Internship duration: 6 months · Team Lead promotion: 3 months

PROJECTS

[TrackMate](#)

Built an offline-first scheduled activity and habit tracker using BLoC state management and typed Drift persistence. Engineered interactive visual analytics and trend metrics with FL Chart and calendar-based timeline scheduling.

[Linux RDP Client](#)

Built a Linux remote desktop client with connection management, persistent storage, add/edit flows, status tracking, and FreeRDP launching via system processes.

Implemented connection validation, favorites/search, configurable resolution, clipboard/audio options, and user-friendly RDP error mapping.

[QRCodeGeneratorReader](#)

Developed a cross-platform Flutter application that generates QR codes and reads/scans QR codes from the application interface.

[CatDogClassifier](#)

Built a Flutter image-classification application for identifying cats and dogs, integrating an image classification model into the app workflow.

[duplicateDeleterApplication](#)

Built a duplicate-file detection and cleanup application with folder scanning, duplicate grouping, storage analysis, selective Keep One flow, and deletion confirmation.

Migrated the duplicate-detection engine to Dart and added automated tests for the core scanning and hashing workflow.

[EngineeringCricket](#)

Designed and programmed an interactive finger-cricket game with custom game logic, state handling, animations, and persistent game state.

EDUCATION

B.Tech in Artificial Intelligence

Expected Graduation: 2027 · University Engineering Curriculum · Jaipur, Rajasthan

CGPA: 8.5/10

TECHNICAL SKILLS

Languages & Frameworks: Flutter, Dart, Material 3, Flutter Web

Backend / APIs / Storage: Drift (SQLite), Firebase (Auth, Firestore), REST APIs, Shared Preferences, JSON

Core Competencies: Production App Delivery, Offline-First Architecture, Responsive UI, Performance Profiling

Architecture & State: Clean Architecture, MVVM, BLoC & Cubit, GetX, Provider

Tools & Workflow: Git, GitHub, Android Studio, VS Code, Postman, CI/CD, Pull Requests
