

ARPIT KUMAR YADAV

FLUTTER DEVELOPER • CROSS-PLATFORM SPECIALIST

arpityadav783791@gmail.com | +91 7652086399 | Jaipur, Rajasthan, India
Portfolio: arpityadav783791-cloud.github.io/Personal_Portfolio | github.com/arpityadav783791-cloud | linkedin.com/in/arpit-yadav-ab41333aa

PROFESSIONAL SUMMARY

Results-driven Flutter Developer with commercial production application experience developing cross-platform software using Dart, Flutter, and GetX/BLoC. Proven track record building responsive UIs, architecting decoupled modules using Clean Architecture and MVVM, integrating complex RESTful APIs, and implementing local persistence (Drift/SQLite). Strong problem solver dedicated to zero-jank 60fps performance and disciplined Git collaboration.

WORK EXPERIENCE

- Flutter Developer — *Xavirgin Technologies* June 2026 – Present | Jaipur, India
- **Production Application (FixMyMeeting):** Developed and maintained critical enterprise application modules including Marketplace, Auctions, Real-Time Chat, and Push Notifications.
 - **Dynamic UI & Performance:** Engineered a highly responsive cross-device UI and dynamic Banner System, significantly improving user interaction and visual conversion rates.
 - **API & Location Services:** Implemented robust location-based services and RESTful APIs, guaranteeing a highly scalable and resilient responsive client architecture.
 - **Bug Elimination & Optimization:** Executed comprehensive profiling and bug fixing, resolving edge-case rendering bottlenecks within an Agile development lifecycle.
 - **Codebase Quality:** Facilitated continuous delivery through strict Git workflows, structured Pull Requests, peer code reviews, and modular component design.

KEY PROJECTS

- FixMyMeeting | *Production Mobile Application* Flutter • Dart • GetX • REST APIs
- Architected core commercial modules (Marketplace, Auctions, Live Chat, and Notifications) using Clean Architecture and GetX.
 - Integrated geolocation mapping services and automated background notification listeners for sub-second user updates.
- TrackMate | [GitHub Repository](#) Flutter • BLoC • Drift (SQLite) • FL Chart
- Built an offline-first scheduled activity and habit tracker utilizing BLoC state management and typed Drift (SQLite) persistence.
 - Engineered interactive visual analytics and trend metrics using FL Chart, integrated with custom Table Calendar timeline scheduling.
- Tesla News Application | [GitHub Repository](#) Flutter • REST APIs • Clean Architecture
- Developed a customized real-time news aggregator consuming live News REST APIs with advanced search and debounced keyword filtering.
 - Implemented Clean Architecture separating network repositories from presentation, enabling effortless responsiveness across screen sizes.
- Engineering Cricket Game | [GitHub Repository](#) Flutter • Custom Logic • Fluid Animations
- Designed and programmed an interactive finger-cricket game characterized by custom game logic and fluid custom animations.
 - Applied reliable state management solutions to sustain consistent 60fps frame rates and game state persistence.
- Weather Application | [GitHub Repository](#) Flutter • GetX • Weather REST API
- Built high-utility weather tracker consuming live Weather APIs for real-time forecasts, utilizing GetX for state management.

EDUCATION

- B.Tech in Artificial Intelligence Expected Graduation: 2027
- University Engineering Curriculum • Jaipur, Rajasthan CGPA: 8.5 / 10

TECHNICAL SKILLS

- **Languages & Frameworks:** Flutter, Dart, Material 3, Flutter Web
- **Architecture & State:** Clean Architecture, MVVM, BLoC & Cubit, GetX, Provider
- **Backend, APIs & Storage:** Drift (SQLite), Firebase (Auth, Firestore), REST APIs, Shared Preferences, JSON
- **Tools & Workflow:** Git, GitHub, Android Studio, VS Code, Postman, CI/CD, Pull Requests
- **Core Competencies:** Production App Delivery, Offline-First Architecture, Responsive UI, Performance Profiling
